TAYLOR, BARRY W

ART UNIT PAPER NUMBER

2617

DATE MAILED: 07/18/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/069,485	Applicant(s) ANDRESEN ET AL.	
	Examiner Barry W. Taylor	Art Unit 2617	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 May 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 May 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

1. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henderson et al (6,404,869 hereinafter Henderson) in view of "E-Plus" pamphlet dated 1998 found on 1449 paper dated 1/25/06.

Regarding claim 1. Henderson teaches a method for customizing a prepaid service (abstract, figure 1) in a telecommunications system, the method comprising:

maintaining subscriber information on at least one prepaid subscriber (see 106 figure 1 used to store subscriber information for subscribers);

defining at least two different prepaid profiles, each prepaid profile defining at least one attribute for the prepaid service (see 106 figure 1 used to define profiles such as card usage data having attributes of remaining minutes, unit billing rates (col. 5 lines 16-53), other profiles include location identifier(s) corresponding to geographic locations, telephone numbers having attributes of special, preferred, and discount telephone service rates (col. 5 lines 16-53);

associating the subscriber's subscriber information with one of the at least two different profiles (col. 5 lines 54-64), and

providing the prepaid service to the subscriber as indicated by the attribute defined in the one prepaid profile associated with the subscriber (col. 5 lines 41-47).

According to Applicants newly amended claim language Henderson fails to show the attribute indicating how the prepaid service is to be updated during recharge (see Applicants newly amended claims and brief comments, paper dated 10/17/05). Applicants further contend that Henderson not only fails to show how prepaid card is updated during recharge but is silent with respect to what happens when the prepaid card is not replenished during recharge (see Applicants remarks on starting on page 3 and continuing to page 6 (**especially the last five lines of page 6**)).

However, E-Plus already teaches customized method for prepaid service wherein at least tow different prepaid profiles are offered to user which define how the prepaid service is updated during recharge (see left side of page 1 wherein more options provided to prepaid card users, see left side of page 2 wherein prepaid service provides great flexibility to users, see right side of page 2 wherein attributes listed for at

least tow different prepaid profiles which provide for customized prepaid service, see page 3 wherein prepaid card will lapse when prepaid card not replenished during recharge).

It would have been obvious for any one of ordinary skill in the art at the time of invention to utilize the teachings of E-Plus into the teachings of Henderson in order to provide for a more flexible prepaid service that allows users more options to choose from when recharging prepaid service.

Regarding claim 2. Henderson discloses carrying out associating during subscription provisioning (col. 5 lines 16-21).

Regarding claim 3. Henderson discloses updating subscriber information during recharge (col. 6 lines 14-23).

Regarding claims 4, 8 and 13. Henderson does not explicitly show the attribute of being a deposit function defining how to calculate the credit during recharge.

E-Plus already teaches customized method for prepaid service wherein at least tow different prepaid profiles are offered to user which define how the prepaid service is updated during recharge (see left side of page 1 wherein more options provided to prepaid card users, see left side of page 2 wherein prepaid service provides great flexibility to users, see right side of page 2 wherein attributes listed for at least tow different prepaid profiles which provide for customized prepaid service, see page 3 wherein prepaid card will lapse when prepaid card not replenished during recharge).

It would have been obvious for any one of ordinary skill in the art at the time of invention to utilize the teachings of E-Plus into the teachings of Henderson in order to

Art Unit: 2617

provide for a more flexible prepaid service that allows users more options to choose from when recharging prepaid service.

Regarding claims 5, 9 and 14. Henderson does not explicitly show the attribute of being an expiry function defining how to calculate the validity time of the prepaid account.

E-Plus already teaches customized method for prepaid service wherein at least tow different prepaid profiles are offered to user which define how the prepaid service is updated during recharge (see left side of page 1 wherein more options provided to prepaid card users, see left side of page 2 wherein prepaid service provides great flexibility to users, see right side of page 2 wherein attributes listed for at least tow different prepaid profiles which provide for customized prepaid service, see page 3 wherein prepaid card will lapse when prepaid card not replenished during recharge).

It would have been obvious for any one of ordinary skill in the art at the time of invention to utilize the teachings of E-Plus into the teachings of Henderson in order to provide for a more flexible prepaid service that allows users more options to choose from when recharging prepaid service.

Regarding claims 6, 10 and 15. Henderson does not explicitly show the attribute of being an expiry state handling function defining how the possibilities of a subscriber are limited over time when no recharge is carried out.

E-Plus already teaches customized method for prepaid service wherein at least tow different prepaid profiles are offered to user which define how the prepaid service is updated during recharge (see left side of page 1 wherein more options provided to

Art Unit: 2617

prepaid card users, see left side of page 2 wherein prepaid service provides great flexibility to users, see right side of page 2 wherein attributes listed for at least two different prepaid profiles which provide for customized prepaid service, see page 3 wherein prepaid card will lapse when prepaid card not replenished during recharge).

It would have been obvious for any one of ordinary skill in the art at the time of invention to utilize the teachings of E-Plus into the teachings of Henderson in order to provide for a more flexible prepaid service that allows users more options to choose from when recharging prepaid service.

Regarding claim 7. Henderson teaches a telecommunications system offering prepaid subscription services (see 104 figure 1), the system comprising at least one database (see 106 figure 1) having subscriber information on at least one prepaid subscriber, wherein the system is arranged to maintain at least two different profiles, each profile defining at least one attribute for the prepaid service (see 106 figure 1 used to define profiles such as card usage data having attributes of remaining minutes, unit billing rates (col. 5 lines 16-53), other profiles include location identifier(s) corresponding to geographic locations, telephone numbers having attributes of special, preferred, and discount telephone service rates (col. 5 lines 16-53); to associate the subscriber's subscriber information with one profile (col. 5 lines 54-64); and to provide the prepaid service to the subscriber as indicated by the attribute defined in the profile associated with the subscriber (col. 5 lines 41-47).

According to Applicants newly amended claim language Henderson fails to show the attribute indicating how the prepaid service is to be updated during recharge (see

Applicants newly amended claims and brief comments, paper dated 10/17/05).

Applicants further contend that Henderson not only fails to show how prepaid card is updated during recharge but is silent with respect to what happens when the prepaid card is not replenished during recharge (see Applicants remarks on starting on page 3 and continuing to page 6 (**especially the last five lines of page 6**)).

However, E-Plus already teaches customized method for prepaid service wherein at least tow different prepaid profiles are offered to user which define how the prepaid service is updated during recharge (see left side of page 1 wherein more options provided to prepaid card users, see left side of page 2 wherein prepaid service provides great flexibility to users, see right side of page 2 wherein attributes listed for at least tow different prepaid profiles which provide for customized prepaid service, see page 3 wherein prepaid card will lapse when prepaid card not replenished during recharge).

It would have been obvious for any one of ordinary skill in the art at the time of invention to utilize the teachings of E-Plus into the teachings of Henderson in order to provide for a more flexible prepaid service that allows users more options to choose from when recharging prepaid service.

Regarding claims 11-12. Henderson teaches a network element (see 104 figure 1) in a telecommunication where subscribers of the system can prepay for their calls (col. 6 line 19) using prepaid card (120 figure 1) inherently reading on voucher, the element including a database (see 106 figure 1) or a connection (col. 5 lines 1-16) to a database having subscriber information of prepaid subscribers, wherein the network

Art Unit: 2617

element is arranged to have access to profile definitions, each profile defining at least one attribute for the prepaid service (see 106 figure 1 used to define profiles such as card usage data having attributes of remaining minutes, unit billing rates (col. 5 lines 16-53), other profiles include location identifier(s) corresponding to geographic locations, telephone numbers having attributes of special, preferred, and discount telephone service rates (col. 5 lines 16-53)), and to update the subscriber information during recharge according to a profile associated with the recharging subscriber's subscriber information (col. 6 line 19).

According to Applicants newly amended claim language Henderson fails to show the attribute indicating how the prepaid service is to be updated during recharge (see Applicants newly amended claims and brief comments, paper dated 10/17/05). Applicants further contend that Henderson not only fails to show how prepaid card is updated during recharge but is silent with respect to what happens when the prepaid card is not replenished during recharge (see Applicants remarks on starting on page 3 and continuing to page 6 (**especially the last five lines of page 6**)).

However, E-Plus already teaches customized method for prepaid service wherein at least tow different prepaid profiles are offered to user which define how the prepaid service is updated during recharge (see left side of page 1 wherein more options provided to prepaid card users, see left side of page 2 wherein prepaid service provides great flexibility to users, see right side of page 2 wherein attributes listed for at least tow different prepaid profiles which provide for customized prepaid service, see

page 3 wherein prepaid card will lapse when prepaid card not replenished during recharge).

It would have been obvious for any one of ordinary skill in the art at the time of invention to utilize the teachings of E-Plus into the teachings of Henderson in order to provide for a more flexible prepaid service that allows users more options to choose from when recharging prepaid service.

Regarding claim 16. Henderson teaches defining profiles before accessing telecommunication system (col. 5 lines 16-21).

Response to Arguments

2. Applicant's arguments with respect to claims 1-16 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barry W. Taylor, telephone number (571) 272-7509, who is available Monday-Thursday, 6:30am to 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Trost, can be reached at (571) 272-7872. The central facsimile phone number for this group is **571-273-8300**.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group 2600 receptionist whose telephone number is (571) 272-2600, the 2600 Customer Service telephone number is (571) 272-2600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Centralized Delivery Policy: For patent related correspondence, hand carry deliveries must be made to the Customer Service Window (now located at the Randolph

Application/Control Number: 10/069,485
